Introduction

Pig token is 100% community owned that will reward its holders for years to come so they can enjoy the ever-rising floor price.

There is a decentralized deflationary token on the Binance Smart Chain. It is designed to reward the long-term holders. Being the first of its kind implementing this black hole design, it exponentially cuts down the total supply of Pig with every transaction. Combining this with Pig's innovative Auto-Liquidity feature, Pig's liquidity pool is rapidly increased with every transaction.

Problem Solving

In today's age of crypto unfortunately there is many scams and rug-pulls, where liquidity has been taken from the holders. By having Pig's ownership renounced and liquidity locked in Pancakeswap forever. The community is ensured that they can freely hold and trade Pig token without the worry of liquidity being stolen.

Pig is also 100% community owned and run, meaning total decentralization. We love this part of Pig and love our community even more. This alone makes it so exciting for the future of Pig Token.

Tokenomics

Table 1.1: Key Metrics

Token: Ping Finance

Circ Supply: N/A

Total Supply : 1,000,000,000,000,000

Market Cap: N/A

Fully Diluted Market Cap: \$308,700,000.00

Table 1.2 Burn Data

Date	# of pig burned
28-04-2021	516,183,696,289,947K
08-07-2021	516,183,697,457,398K
23-09-2021	516,183,697,475,291K

Vision

After achieving all our milestones within a small-time frame. Listing on over 17 Cex platform, coin market cap and coin gecko, smart contract security audits and multiple partnerships. Pig has so much in store for the future.

Production

There is production with development work for burn. Burning tokens manually will play a crucial role on Pig's future. This wallet will be used to buy back pig tokens when the price goes below a certain threshold. These tokens will then manually get burnt and sent to the blackhole. This will increase scarcity of the token which will then increase the value. This manual burn event will occur quarterly throughout the year.

1. Pig swap
2. Merchandise
3. The Pig Tracker App

Production — Pigswap

Pig Swap allows users to trade Pig tokens and other cryptocurrencies without an intermediary. The platform will enable users to exchange their tokens directly from their wallets with other BEP-20 compatible tokens.

Production — Merchandise

Pig finance has created its own merchandise crafted with bespoke high-quality material. Our team of fashion/designers have collaborated to create a variety range of clothes; t-shirts, jumpers, tracksuits, caps and a fashion line of pig baby clothing. The funds from the merchandise will be used to get listing on big exchanges and help build the infrastructure of our ecosystem. This will allow us to manage pig finance as a world class business.

Production — The Pig Tracker App

Keep track and stay informed on the latest prices in real-time, view essential market data at a glance, and effectively monitor your investments using the Pig Tracker App. Sophisticated enough for professional investors but simple enough to use for enthusiastic first-timers, PIG Tracker app has everything you need to manage and grow your crypto portfolio. Measure your performance, learn about and anticipate crypto value changes, and know instantly when crypto prices move, PIG Tracker app helps you make better decisions about your investments. Track PIG, and over 5,000 altcoins prices from 250+ exchanges.

Supportion

The Donation Wallet

This is our marketing wallet; the funds will be used to create marketing campaigns. We want to make Pig known across the world. We will market Pig around the world using billboards, visual ads, digital advertisement campaigns, social media marketing, content marketing, advertisement via radio and many more.
